Education

RNS Institute of Technology

Bachelor of Engineering in Artificial Intelligence and Machine Learning (AIML)

- GPA: 8.5

2022 – 2026

Bengaluru, India

Skills

Technical Skills: Web Development, System Design, CI/CD, Cloud Infrastructure (Azure)

Languages: C++, Java, HTML, CSS, JavaScript

Libraries/Tools: Node.js, React.js, Express.js, Supabase, Docker, Kubernetes, GitHub

Database Management: PostgreSQL, MySQL

Relevant coursework: SDLC, Data Structures, OOPS, DBMS

Professional Experience

• Sasken Technologies

June 2025 – July 2025

Intern

- Designed and implemented a **Data Management Module** in C++, building data structures to store stock symbols and company names for fast lookup and validation.
- Developed **data parsing and file handling routines** to support efficient backend stock data retrieval within an existing modular architecture.
- Collaborated with **backend and security teams** to integrate the module cleanly, following established modular design conventions across the codebase.

• Adversity Solutions

January 2026 – June 2026

Backend Developer

- Engineered robust RESTful APIs and server-side logic using Node.js and Express to power a dynamic B2B invoice management dashboard, ensuring secure data flow and reducing page-load latency for real-time data retrieval.
- Designed and optimized relational database schemas to efficiently handle transactional invoicing records, customer profiles, and metadata while maintaining strict data integrity across complex concurrent write operations.
- Implemented secure authentication and state management workflows on the server to manage multi-tenant dashboard access, protecting sensitive corporate financial data and preventing unauthorized route access.

Projects

Real -Time Stock Price Tracker : | *Linux, C++, Multi-threading, REST API, Logging, CMake.*

- Built a **multi-threaded C++ application** to process **1,000+** live stock price updates per second using concurrent task scheduling and per-thread work queues.
- Integrated the **Twelve Data REST API** with JSON parsing to fetch and display real-time prices across 8,000+ NASDAQ symbols with sub-100ms latency.
- Secured all communication using **mTLS over TCP with OpenSSL and NGINX**; built modular components for price alerts, watchlist management, and CSV logging.

Smart Bookmark Web App: | *React.js, JavaScript, Supabase, Google OAuth, PostgreSQL.*

- Built a bookmark manager with **auto metadata fetch** using Open Graph and meta-description to generate instant page summaries, and **duplicate detection** to prevent users from saving the same link twice.
- Developed a **Chrome extension** for one-click bookmarking that captures the active tab's URL and title and pre-fills the dashboard automatically.
- Implemented **Google OAuth** for authentication and enforced **row-level security(RLS) in PostgreSQL** via Supabase for database-level data access control.

Achievements

- Won 1st Place in a State-Level Painting Competition, demonstrating creativity, artistic excellence, and attention to detail.
- Organized a College Tech Quiz Competition and served as Lead of the Photography Digital Media Club for the college cultural team, coordinating events, managing creative content, and leading cross-functional student teams.
